

Golf or Utility Vehicle Motor Control SXDC and SXDC+ from Kinetek

Kinetek Controls®

A Kinetek Company®

Kinetek SXDC and SXDC+ controllers for separately excited DC motors are designed specifically for golf carts, personnel transport, and utility transport vehicles. Separately excited motor controllers provide accurate control for both motor armature and field windings, resulting in optimum motor torque control across the speed range.

The SXDC controller comes in 36 VDC, and the SXDC+ controllers come in 24, 36, and 48 VDC configurations. The SXDC+ models provide auxiliary outputs for electronic brake control and hour meter compatibility.

Both SXDC and SXDC+ controllers are fully programmable and user-configurable through serial connection to any Windows compatible PC. Both provide silent, smooth, efficient motor control and are fully potted for superior vibration resistance and harsh environment survive-ability.

Fully regenerative braking, potentiometer or inductive throttle input, on-board diagnostics, and overvoltage / undervoltage protection are standard features on both controllers. Surface-mount, MOSFET designs allow each to provide optimum power density.

SXDC controller is available in 36 volt.

SXDC+ controllers are available in 24, 36, and 48 volt (SXDC+24/36/48) versions.

Features

- Armature & Field control for optimum torque and speed
- Full regenerative braking
- Surface mount MOSFET technology
- On-board diagnostics, audible & visual
- Potentiometer or Inductive throttle input
- Over and Under Voltage protection
- Fully potted for vibration and environmental durability
- Silent, Efficient, Smooth motor control
- Compact size

Models

- SXDC 36V: KCCA0018
- SXDC+ 24V: KCCA0049
- SXDC+ 36V: KCCA0065
- SXDC+ 48V: KCCA0038
